User Manual – MediaBox

29 de Marzo del 2026

Multimedia Download Platform

¡Give it a try!

MediaBox is a Java desktop application that allows users to manage and download multimedia resources.

It provides tools to download content, manage a local media library and interact with cloud resources

Main Features

- User authentication
- Remember me functionality
- Download multimedia from URLs
- Local media library management
- Media organization through categories
- Cloud synchronization
- Media playback
- User preferences configuration.

Contents

- Login
- Menu options
- Configuration for downloads
- Downloading multimedia content
- Download Information
- Author's information
- Open the user manual and Javadoc

Getting Started

1. Log in with your account

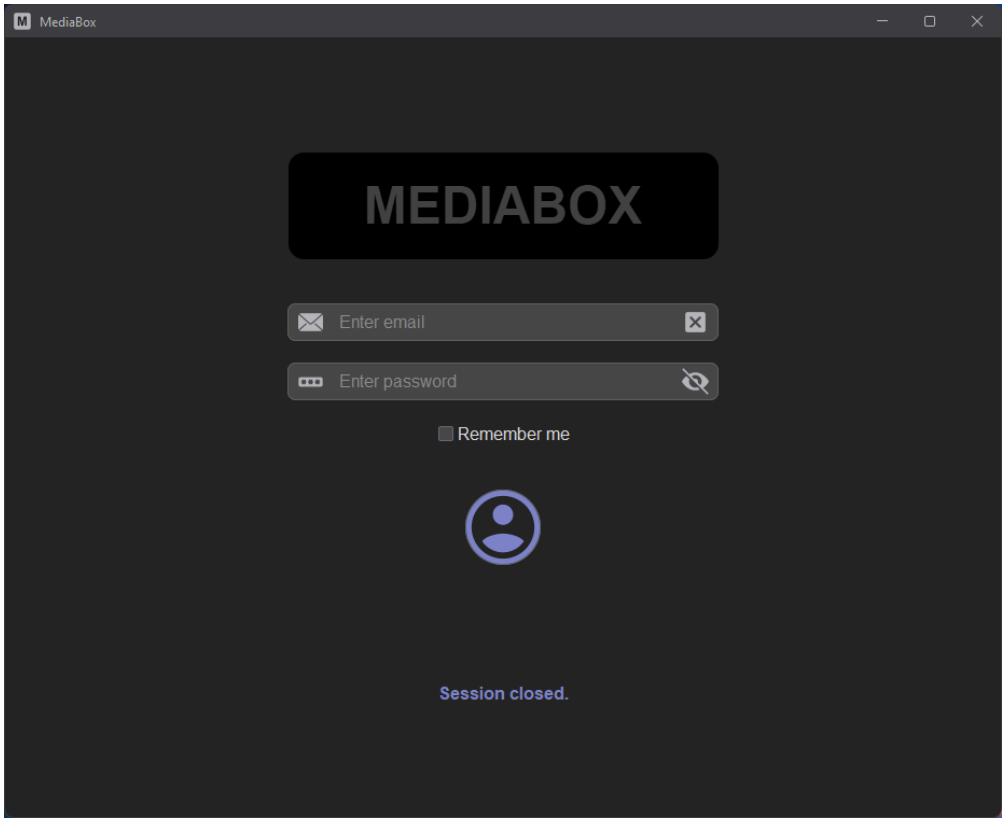

When the application starts, the login screen is displayed.

Users must enter:

- Username
- Password

The login interface includes:

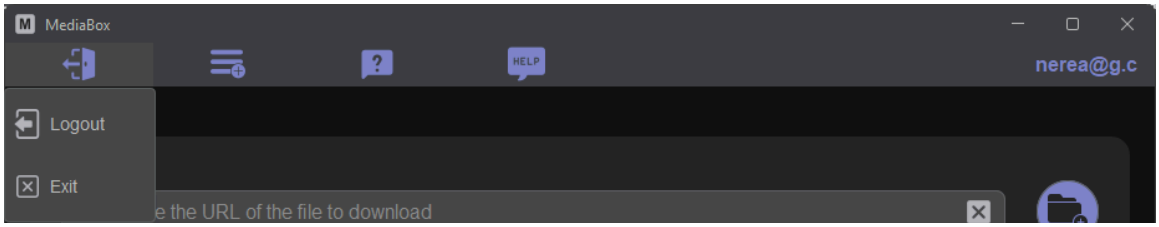

- An icon to clear the email text field
- An icon to show or hide the password
- A Remember me option to store the username
- A purple main login button

2. Menu options

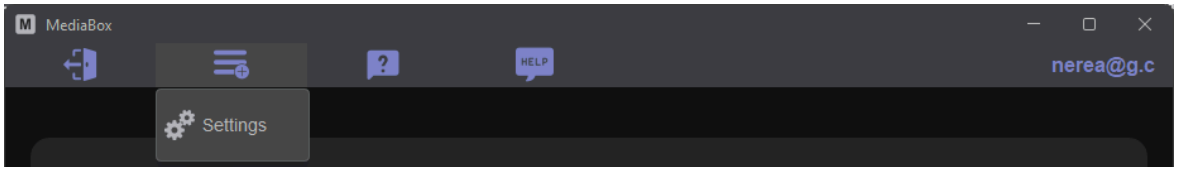

Logout & Exit:

- The Logout button takes you back to the login screen
- The Exit button closes the application completely

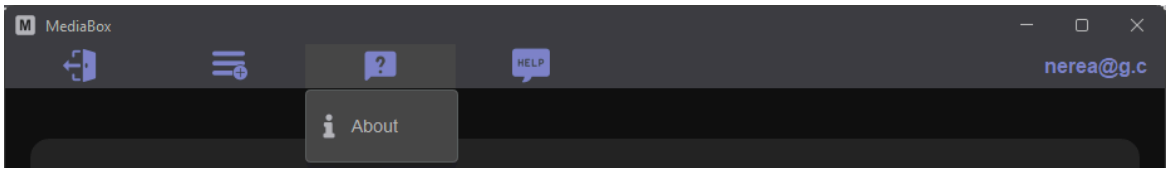

Properties:

- The Settings button allows you to set the initial configuration for downloads

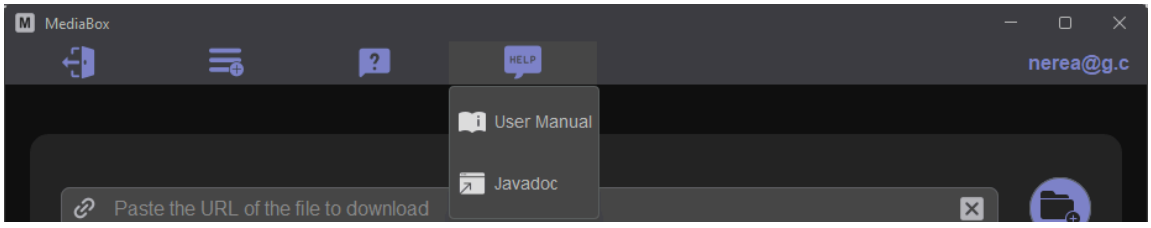

Information:

- The About button show the Information about the author and the app

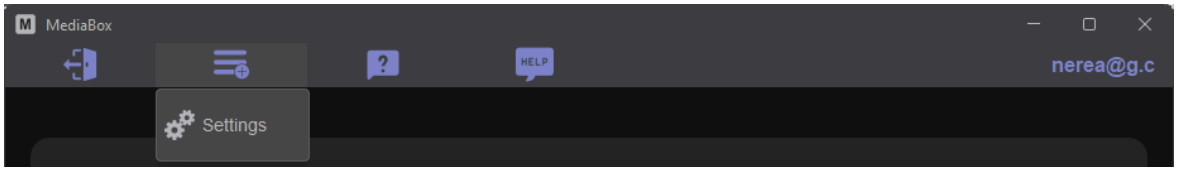

Help:

- The User Manual button opens the user manual document
- The Javadoc button opens the index.htm file in the browser

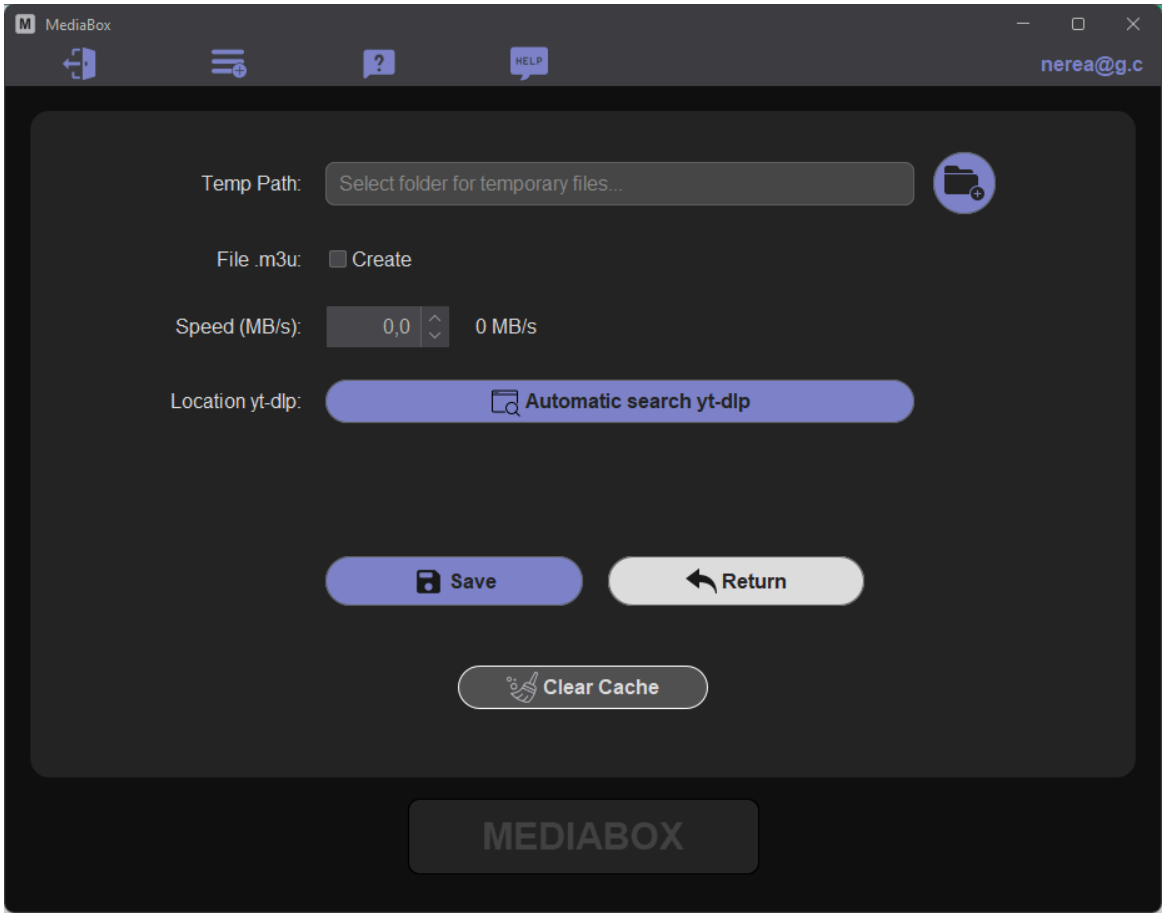

3. Configuration for downloads

In the menu, the Settings button:

Configuration:

- Temp path: Select the folder for temporary files (optional)
- .m3u: Selecting “Create” will generate a file containing the download locations (optional)
- Speed: Allows you to set the download speed
- The “Automatic Search” button in YT-DLP will automatically search for the file (required)
- The Save button will save the settings
- The Return button will take you back to the main screen without saving your changes.
- The “Clear Cache” button will clear the stored data

4. Downloading Multimedia Content

Users must enter:

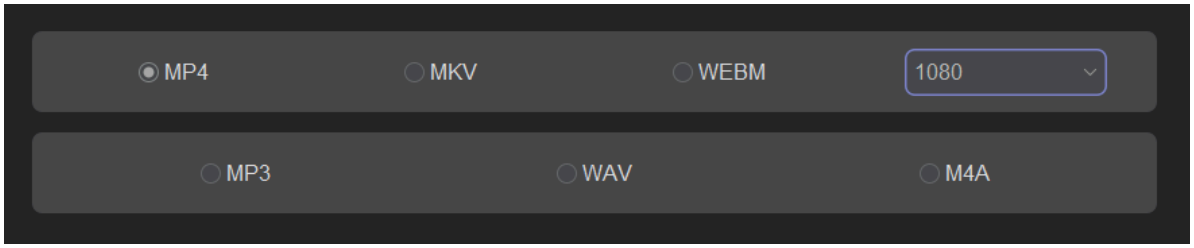

- The URL input field allows you to paste from the clipboard and clear the text field
- Folder button (purple) to select the destination folder

Select Video or Audio:

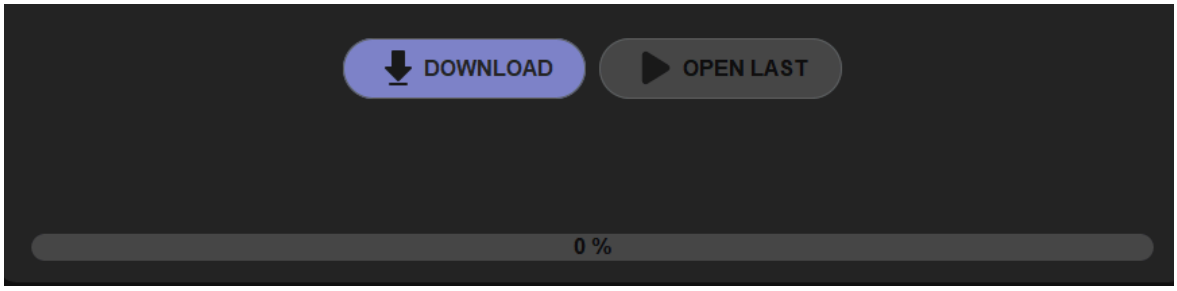

- Video
    - Select the video format (MP4, MKV or WEBM)
    - Select the quality (1080, 720 or 480)

- Audio
    - Select the audio format (MP3, WAV or M4A)

Start Download:

- Click the **Download** button to start the download
- The progress bar will show as complete once the download is finished
- Press the **Open Last** button to play the most recently downloaded file

5. Download Information

List of directories:

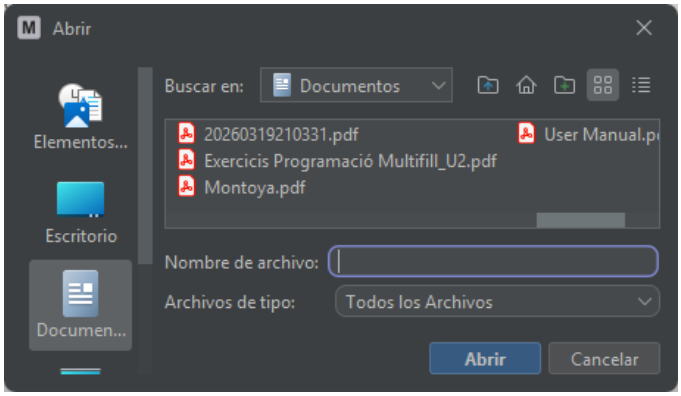

- Displays the directories where the downloads have been saved
    - ApiFiles, Both & Local Folders

Information about downloads in the table:

- Name, Size (MB), Type (MP4, MP3, MKV, etc..), Date
- Actions: depending on the file's location, you can perform various actions
    - **Api Files:** Download file
    - **Both**: Play or delete file
    - **Local folder**: Play or delete file

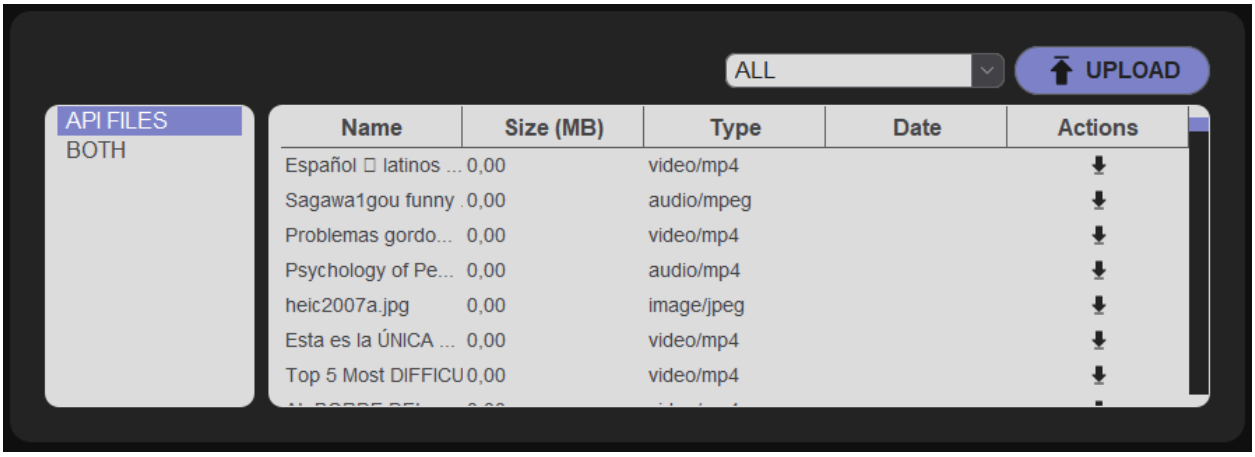

Upload file to API Files:

- Clicking the **Upload** button allows you to select the file you wish to upload

Filter the information by file type:

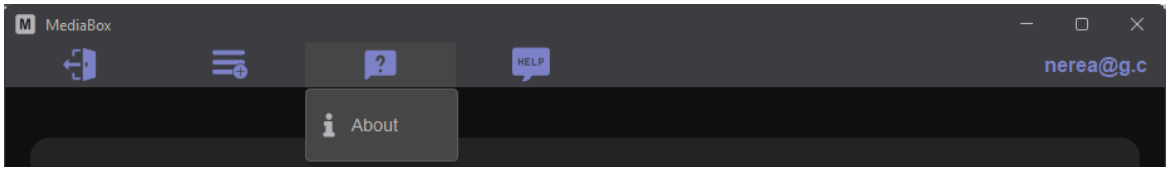

- Allows you to filter the table's content by specifying the file type

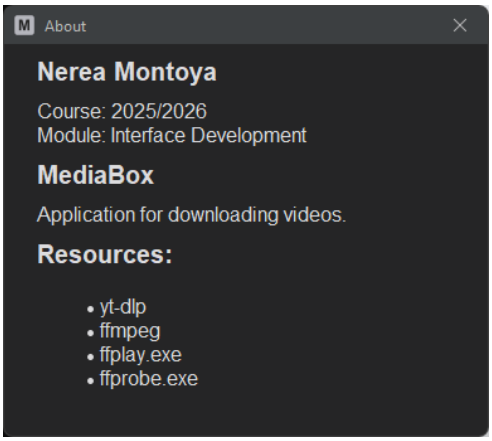

6. Author's information

In the menu, the About button:

- The About button show the Information about the author and the app

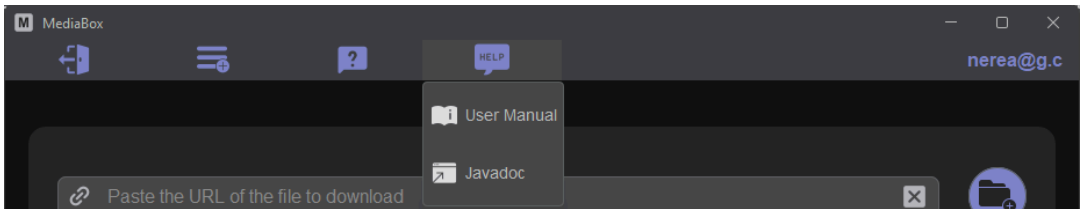

- It will open a dialog box showing information about the author

7. Open the user manual and Javadoc

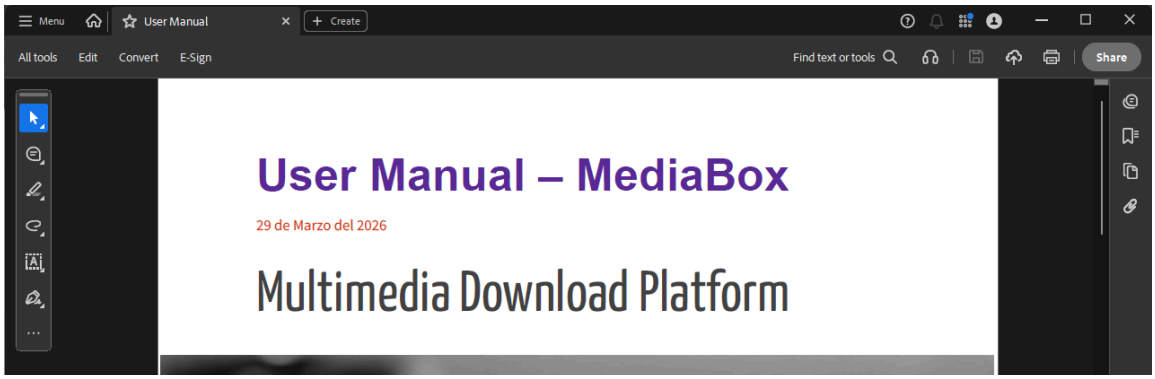

In the menu, the Help button:

- User Manual
- Javadoc

View the user manual:

- The user manual will open with the default application

View the Javadoc:

- The Javadoc will open in a browser tab by default
